

Comparison with Environmental Reporting Guidelines 2018, Ministry of the Environment, Japan

The Shin-Etsu Polymer Group is disclosing the comparison table following the indicators in the Environmental Reporting Guidelines (2018) with Sustainability Report 2023 and our website.

Chapter 1: Basic Information of Environmental Reporting		
Items	Sustainability Report 2023/Website	
1. Basic Requirements for Environmental Reporting		
1-1. Boundary	P4	
1-2. Reporting period	P4	
1-3. Reporting standards and guidelines	P4	
1-4. Overview of the environmental report	P4	
2. Trends in Key Performance Indicators		
Trends in major performance indicators	P24	
Chapter 2: Items to Be Included in Environmental Reporting		
Items	Sustainability Report 2023/Website	
1. Top Management Commitments		
Top management commitments on the Shin-Etsu Polymer Group's response to material environmental issues	P7-8	
2. Governance		
2-1. The Shin-Etsu Polymer Group's governance structure	P56	
2-2. The manager responsible for material environmental issues	P10, P21-22	
2-3. The roles of the board of directors and the board of executive officers in the management of material environmental issues	P10, P21-22	
3. Stakeholder Engagement		
3-1. Corporate policies to stakeholders	P13, 21, 24	
3-2. Overview of stakeholder engagement activities conducted in the reporting period	P13, 21, P51-52	
4. Risk Management		
4-1. Environment-related risk identification, assessment, and management processes	P62-64	
4-2. Positioning of the above processes within the Shin-Etsu Polymer Group's overall risk management	P62-64	
5. Business Model		
The Shin-Etsu Polymer Group's business model	-	
5. Value Chain Management		
6-1. Value chain overview	P12	
6-2. Green procurement policy, objectives, and results	-	
6-3. Status of eco-friendly products and services	P14-19	
7. Long-term Vision		
7-1. Long-term vision	P36	
7-2. Time period covered by the long-term vision	P36	
7-3. Reasons why that time period was selected	-	
8. Strategy		
Business strategy of an Shin-Etsu Polymer Group developed for contributing to the achievement of a sustainable society	P35	
9. Methodology for Identifying Material Environmental Issues		
9-1. Procedure by which the Shin-Etsu Polymer Group identified its material environmental issues	P11	
9-2. List of identified material environmental issues	P11	
9-3. Reasons that the identified environmental issues were judged material	P11	
9-4. Boundaries of the material environmental issues	P11	
10. Shin-Etsu Polymer Group Material Environmental Issues		
10-1. Policies and/or action plans	P21, P24	
10-2. Targets and results of policies / action plans based on performance indicators	P24	
10-3. Methodologies used for calculating each performance indicator	P24, 26	
10-4. Aggregation scope of data for each performance indicator	P24, 26	
10-5. Financial impact of related risks and opportunities and calculation methodology thereof, if the financial impact is significant	-	
10-6. An assurance report, if an independent third party provided assurance to the items to be reported	-	
Reference : Major Environmental Issues and Their Performance Indicators		
Items	Sustainability Report 2023/Website	
1. Climate Change		
Greenhouse Gas Emissions		
1-1. Scope 1 emissions	P27-28	
1-2. Scope 2 emissions	P27-28	
1-3. Scope 3 emissions	P28	
Emission Intensity		
1-4. Greenhouse gas emission intensity	P27	
Energy Usage		
1-5. Breakdown of energy usage and overall energy usage	P26-27	
1-6. Renewable energy usage as a percentage of overall energy usage	-	
2. Water Resources		
2-1. Water resource inputs	P33	
2-2. Water intensity	-	
2-3. Water discharge	P33	
2-4. Status of water stress, if the entity has sites or supply chains located in areas with water stress	-	
3. Biodiversity		
3-1. Impact of business activities on biodiversity	P33	
3-2. Status and extent of the dependency of the entity's business activities on biodiversity	P33	
3-3. Business activities that contribute to biodiversity conservation	P33	
3-4. <input type="checkbox"/> Status of cooperation with external stakeholders	P51	
4. Resource Circulation		
Resource Inputs		
4-1. Volume of nonrenewable resource inputs	P26, 29	
4-2. Volume of renewable resource inputs	P26, 29	
4-3. Volume of recycled materials used	-	
4-4. Rate of recycled and reused resources (= Volume of recycled materials used / Volume of resource inputs)	-	
Resource Waste		
4-5. Total production of waste	P26, 29	
4-6. Total final disposal volume of waste	P26, 29	
5. Chemical Substances		
5-1. Volume of chemical substances in storage	P26, 30-32	
5-2. Volume of chemical substance emissions	P26, 30-32	
5-3. Volume of chemical substances transferred	P26, 30-32	
5-4. Volume of chemical substances handled (volume used)	P26, 30-32	
6. Pollution Prevention		
General		
6-1. Status of legal compliance	P60-61	
Air Quality Conservation		
6-2. Air-pollutant emissions volume, emission concentration in air pollution regulations	P32	
Water Pollution		
6-3. Water pollution load, emission concentration in emissions regulations	-	
Soil Pollution		
6-4. Status of soil pollution	-
